

Dr. Ákos Makra

Test Automation Engineer

Budapest, Hungary · akosmakra@gmail.com · +36 20 556 5333

SUMMARY

Test automation engineer with about four years of testing experience and a PhD in Information Science. At Magyar Telekom I write and maintain automated system and E2E regression tests in Python, based on business requirements. Before that, I wrote unit and integration tests for dialysis machine software at B. Braun. My strengths are test design and making test suites reliable: I led the work that raised our regression pass rate from **under 65% to over 95%**.

SKILLS

Test Automation: Behave (BDD), Gherkin, Playwright, Selenium, CppUTest; system, E2E, regression, unit and integration testing

Programming: Python (Ruff), C, C++, SQL, MATLAB

API & CI/CD: REST API testing in Python, Postman, Git, GitLab CI/CD

AI Tools: Claude, Claude Code

Monitoring & Tools: Kibana, OpenSearch, Jira, Zephyr, Confluence, IBM DOORS

Languages: English (fluent), German (intermediate), Hungarian (native)

WORK EXPERIENCE

Test Automation Engineer

Jul 2024 – Present

Magyar Telekom Nyrt.

- Write and maintain automated system and E2E regression tests in Python (Behave, Playwright) from business requirements and acceptance criteria, following testing-pyramid principles.
- Led regular team sessions over 9+ months to fix unstable regression tests. Pass rates went from **under 65% to over 95%** on two projects. Together with automating **30%** of the manual regression test cases, this cut full regression on the largest project from **6 testers over 3–4 days to 3 testers in one day**.
- Refactor page objects, step definitions and helper code daily. Removed years of unused code from several repositories and added reusable functions to our shared Python API test library (Pydantic, OpenAPI).
- Set up scheduled GitLab CI/CD pipelines; investigate failed runs using logs in Kibana and OpenSearch.
- Escalated repeated test environment failures at 100 parallel threads, with evidence, until they were fixed. Regression could then run on **100 threads instead of 50**.
- Mentor manual testers in automation and log-based debugging. Interviewed multiple candidates for test automation roles.

Software Tester

Nov 2021 – Jun 2023

B. Braun (via Effective Group Talent Solutions Kft.)

- Wrote automated unit and integration tests in C and C++ (CppUTest) for **safety-critical** software on acute dialysis machines.
- When the code or existing tests were unclear, checked the requirements in IBM DOORS and reported cases where the code did not match them.

Researcher

May 2019 – Sep 2019

MedRes Kft.

- Ran GPU-based ultrasound simulations in k-Wave (MATLAB) and helped with medical device development and testing.

EDUCATION

PhD, Information Science · Roska Tamás Doctoral School of Sciences and Technology

2015 – 2020

Thesis: Ultrasound Image Modelling and Resolution Enhancement

MSc, Info-Bionics Engineering · Pázmány Péter Catholic University

2014 – 2015

BSc, Molecular Bionics Engineering · Pázmány Péter Catholic University

2011 – 2014

RESEARCH INTERNSHIPS (ERASMUS)

- Fraunhofer IBMT, Germany (2016): studied biological tissue with scanning acoustic microscopy.
- University of Florence, MSDLAB, Italy (2015): worked on real-time imaging and feature extraction for an ultrasound device.
- Philips, Eindhoven, Netherlands (2014): analysed surgical biomedical signals.

ACHIEVEMENTS & SCHOLARSHIPS

- First Hungarian to thru-hike the 4,273 km Pacific Crest Trail southbound (130 days, 2023) and the 800 km Pyrenean Haute Route (40 days, 2021).
- New National Excellence (2018, 2019), Young Talent (2017), PhD Excellence (2016), Central Fund (2015); 1st place, Student Scientific Conference (2014, 2015).
